Analyzing E-Learning Platform Purchases using MySQL

Key Insights from the Analysis

1. **Top Revenue Contributors**
    - Courses with higher unit prices and bulk purchases (like IT, AI, and Web Development) generate the most revenue.
    - Categories such as **IT and Web Development** show strong earning potential.
2. **High Demand Courses**
    - Some courses have higher total quantity sold → indicating strong learner interest.
    - Marketing and beginner-level courses tend to attract more learners due to accessibility.
3. **Learner Spending Behavior**
    - A few learners contribute significantly higher total spending (high-value customers).
    - Majority of learners purchase only one category → limited cross-category engagement.
4. **Category Performance**
    - Some categories generate high revenue but may have fewer learners (premium pricing).
    - Others have many learners but lower revenue (low-cost courses).
5. **Unpurchased Courses**
    - Certain courses have **zero purchases**, indicating:
        - Low visibility OR
        - Low demand OR
        - Pricing/content mismatch

Analysis

1. **Descriptive Analysis (What happened?)**
    - Total revenue by category
    - Total spending per learner

    - Purchase details (course, quantity, date)

2. **Diagnostic Analysis (Why did it happen?)**
    - Identifying high-performing vs low-performing categories
    - Understanding why some courses are not purchased
    - Comparing pricing vs demand
3. **Predictive Analysis (What could happen?)**
    - High-demand categories likely to continue performing well
    - Learners buying one category may expand with targeted offers
4. **Prescriptive Analysis (What should be done?)**
    - Suggest actions like promotions, pricing changes, and bundling
